*Description and Specifications are subject to change without notice.
^[1]BDS B2b, GALILEO E6, QZSS L6, IRNSS L5 can be provided by firmware upgrade.
^[2]The measurement accuracy, precision, reliability and initialization time depend on various factors, including tilt angle, number of satellites, geometric distribution, observation time, atmospheric conditions and multi-path validation, etc. The data are derived under normal conditions.
^[3]Irregular operations such as rapid rotation and high-intensity vibration may affect the inertial navigation accuracy.
^[4]The battery operating time is related to the operating environment, operating temperature and battery life.
